

Avaya web.alive

What if together we made the web.alive?

Much of today's technology leaves communication problems unsolved. Working together in real time while in separate locations is ever challenging. Traveling to conferences and events is expensive and often discretionary. While at the same time, training on complex equipment or in hazardous environments is costly and risky. We recognized these problems and developed a solution: web.alive.

What is web.alive?

Simply put, web.alive is a virtual environment software application that provides a government-ready, network-secured platform for staff learning, training applications and collaboration. By using stunning 3D graphics borrowed from the entertainment industry and revolutionary 3D spatial audio, web.alive engages the audience while allowing fluid and natural communication.

With a feature set designed specifically for the enterprise, web.alive integrates with your existing network, security and software tools in order to enhance your agency's communication, collaboration and staff engagement. web.alive is unlike any other virtual world solution available today as it is the only web-based solution with 3D spatial voice.

Empowering communication and collaboration

Team collaboration tools are essential for any agency with geographically disbursed staff to do their jobs effectively.

Traditional collaborative tools like audio conferencing, video conferencing and document sharing have limitations. One of the major drawbacks of most communication technologies today is that they don't provide users with a very "lifelike" experience without allowing for multiple users to communicate at the same time or to experience non-verbal communication.

web.alive provides a more realistic experience through the use of state-of-the-art

web.alive Highlights

- Increase collaboration, learning and engagement while reducing travel costs and the size of your carbon footprint
- Bidirectional interaction with web applications, integration with enterprise network security and existing software
- Web-based 3D audio-visual experience delivered on the hardware you already have on-site
- Epic's® Unreal Engine provides the best 3D graphics and realism with the largest developer community
- Highly customizable environments, objects and avatars

3D voice and graphics, integration with the web and corporate applications for identity and context, and a commitment to providing the best possible user experience. Travel costs are reduced when government agencies use web.alive as they are able to virtually communicate with staff in several locations at a time. web.alive tackles several problems

facing government agencies on both communication/collaboration and cost fronts.

The technology is industry leading

web.alive offers visually stunning, detailed 3D visual environments which can be created from artistic concept, architectural drawings or any combination of 3D assets and environments. Users interact with 3D objects in meaningful ways based on their virtual scenario needs. web.alive users experience revolutionary audio through the Avaya acquisition of Diamondware (3D positional audio technology), which ensures an audio experience that parallels real life in terms of sound quality and propagation.

web.alive Services

Avaya Government Solutions understands that every need will be different. We assist our government clients in solving communication and collaboration challenges by offering:

- **Customized Environments** - providing the opportunity to design a customized virtual space to suit your unique situation
- **Customized Software Integration** - an architecture that enables web.alive to function analogously to the traditional web paradigm allowing customization of web.alive to suit specific software requirements

- **Customized Avatars** - the selection can be extremely personalized creating avatars beyond the normal set included in web.alive or set to a limited subset of avatars
- **Avaya Government Solutions Products and Services** - a wide-range of government-compliant products and services beyond web.alive to suit your specific needs.

Today's environment is often made up of disbursed teams using a myriad of means to collaborate and learn together. web.alive enables agencies and government sectors to meet the growing communication and collaboration challenges facing them while at the same time lowering travel costs, reducing their carbon footprint and increasing knowledge sharing amongst team members.
